Notes: Lloyd Creek Natural Area (5.6 km²) is comprised of two melt-water channels (part of Twin Lakes) and rolling upland. The creek valley, with its steep banks & variety of aspects, supports several forest types, including mature & young upland forests of white spruce, lodgepole pine, paper birch, aspen & balsam poplar; good wildlife habitat.

This site lies in the Foothills Natural Region, Lower Foothills Sub-region. Five level 1 and 38 level 2 natural history themes have been identified for the Lower Foothills. With the exception of mineral wetlands, all of the level 1 themes are well represented in the parks and protected areas network. Level 2 themes are also well represented (Alberta Parks web site, 2012).
