**Notes:** Onefour Heritage Rangeland Natural Area (111.65 km<sup>2</sup>) preserves three parcels of land along the Montana border. The site includes extensive grasslands, ephemeral wetlands, minor badlands and riparian shrublands that provide habitat for numerous rare plants and birds (see species list). The area is also important habitat for swift fox. Landscape features include ground and hummocky moraine, exposed slope, protected slope, valley floor/stream, wet meadows, alkali wetlands, shallow marshes and springs. The site contains two igneous dykes, which are uncommon in Alberta.

The site is in the Grassland Natural Region, Dry Mixedgrass Sub-region. With the exception of glacial lakebed and marshes, most of the landscapes that make up the Dry Mixedgrass Sub-region are moderately well represented in the parks and protected areas network, with about 50% of the preservation targets having been achieved to date.
