**Access:**

**Notes:** Sundance Natural Area has undulating topography dissected by a small creek. The vegetation is mainly open, fire-successional aspen forest with scattered balsam poplar, white spruce and pine over a dense shrub/herb understorey.

This site lies in the Boreal Forest Natural Region, Dry Mixedwood Sub-region. The Dry Mixedwood Sub-region is the only Boreal Forest sub-region that does not have excellent representation within Alberta's parks and protected areas network. There are still significant shortfalls in the glacial lakebed, ground moraine, sandplain and sand dune natural history themes. Listed in "Other Natural Areas" (Alberta Parks web site, 2012).
